For All Your
Boat Building Projects

C Fox Wood Boats & C Fox Boat School

Tim Fox of C Fox Wood Boats has been building wood epoxy and traditional construction boat since 1979.

Boat Building School Focus

Our Boat building school was formally established in 2001. Today our focus is changing from primarily building boats to sell to passing on our many years of experience to the entry-level builder. We now concentrate on teaching modern wood epoxy composite methods. This method involves stitch and glue, glued lap strake and cold molding. Our goal is to encourage the first time builder to finish and launch his or her boat building project while avoiding the many pitfalls associated with a first project.

Formal and Informal Classes

We offer informal one on one and one on two courses throughout the calendar year.

Informal study will be tailored to the student's personal needs and time schedule and typically will require 65-100 hours time commitment to complete the project.

Formal classes and weeklong intensive 7 day courses are offered December thru May during these classes students will complete their OWN BOAT !!!!! At the end of one week the building of the boat will be complete and your new craft will be ready to sand and finish.

Types of Boats

Sea Kayaks, Sliding seat shells, Glued Lap strake rowing sailing and outboard powered skiffs, drift boats and many other projects can be accommodated. We have many boat plans available and can help customize your project.

Our Educational Goals

Our goal is to educate our students so that they can go on to other boat buildings projects and give them the satisfaction of successfully completing their first boat.

Instruction will include but not be limited to basic print reading, lofting, tool sharpening and use, working with epoxy and fiberglass coating and gluing techniques.
